

SURAJ PARMAR

Greater Noida, UP, India | +91 8708097515 | surajparmar058@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

G.L. Bajaj Institute of Technology & Management

B.Tech, Electronics & Communication Engineering

• GPA: 7.56 / 10

2023 - 2027

Greater Noida (AKTU)

Navy Children School

Class XII, PCM

• GPA: 80% (PCM)

2023

Delhi, India

TECHNICAL SKILLS

- **Frontend Development:** React.js, TypeScript, Tailwind CSS, GSAP, CSS3, HTML5
- **Backend Development:** Node.js, Express.js, MongoDB, Supabase, Rest, SQL, PostgreSQL
- **Programming Languages:** JavaScript, C++
- **Tools & Cloud Platforms:** Git, GitHub, AWS, Render, ESP32
- **Technical Fundamentals:** LeetCode, Data Structures, Algorithms, Software Design, OOPS, RDBMS

PROJECTS

Medical Summarizer Medical Summarizer

- Engineered a full-stack TypeScript + React + Node.js platform that converts doctor-patient conversations into structured, patient-friendly medical reports using Gemini NLP, eliminating manual transcription for clinics.
- Designed a RESTful Node.js/Express API in TypeScript and a responsive React frontend styled with Tailwind CSS; integrated OpenAI API for automated NLP-based summarization, reducing report generation time by ~70%.
- Packaged backend and frontend services in Docker containers and set up a CI/CD pipeline on AWS CodeDeploy leveraging GitHub Actions for automated builds and seamless deployments.
- Source code: https://github.com/SURAJ-PARMAR2005/Hack_LLM2

Smart Classroom Monitoring System Smart Classroom Monitoring System

- Built a real-time IoT data pipeline handling seat occupancy, motion, and noise telemetry from 10+ ESP32 sensors, ingesting structured JSON into Supabase Realtime and processing it in under 5-second intervals with GitHub for version control.
- Developed a React and TypeScript dashboard styled with Tailwind CSS and GSAP animations, featuring live charts powered by Supabase Realtime to deliver instant classroom utilization insights and reduce manual checks by ~80%.
- Wrote modular, testable React components and backend validation functions to ensure code quality, maintainability, and support rapid iteration.
- Implemented JWT-based device authentication to secure ESP32-to-cloud communication, preventing unauthorized data injection.
- Source code: https://github.com/SURAJ-PARMAR2005/Hack_LLM2

Food Delivery App Food Delivery App

- Developed a production-grade full-stack MERN food delivery platform supporting JWT authentication, role-based access control (user/admin), and secure session management for real-world usage.
- Built a responsive React UI enabling browsing, search, and filtering across 50+ menu items; implemented end-to-end order lifecycle management with real-time status updates.
- Deployed services on AWS and Render with an admin analytics dashboard providing order volume, revenue, and user metrics for data-driven decision-making.
- Source code: https://github.com/SURAJ-PARMAR2005/food_delivery_website

Fintech Dashboard

- Designed and deployed a production-ready REST API with Node.js, Express.js, and MongoDB, hosted on Render with environment-based configuration for local and production deployments.
- Implemented JWT authentication and Role-Based Access Control (RBAC) with three roles (Admin, Analyst, Viewer), enforcing fine-grained route protection based on user permissions.
- Built custom request validators to enforce strict input rules, including unique email constraints and password strength checks (uppercase, numeric, and special character requirements).
- Source code: https://github.com/SURAJ-PARMAR2005/Zorvyn_Assignment

ACHIEVEMENTS & HACKATHONS

- **Hack LLM - National Level Hackathon:** Team Leader & Top 10 Finalist
- **Medha Hackathon IITB:** Hackathon Participation
- **LeetCode (300+ problems):** Active competitive programmer with 300+ problems solved across Arrays, Strings, Linked Lists, HashMaps, Trees, Graphs, Recursion, Sliding Window, and other core DSA topics using C++.
