

SURAJ PARMAR

Greater Noida, UP, India | +91 8708097515 | surajparmar058@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

G.L. Bajaj Institute of Technology & Management

B.Tech, Electronics & Communication Engineering (GPA: 7.8 / 10)

2023 - 2027

Greater Noida (AKTU)

Navy Children School

Class XII, PCM (GPA: 80% (PCM))

2023

Delhi, India

TECHNICAL SKILLS

- **Frontend:** React.js, TypeScript, Tailwind CSS, GSAP, CSS3, HTML5
- **Backend:** Node.js, Express.js, MongoDB, Supabase, Redis, Rest, modular monolith architecture, SQL, Postgresql, Web Services
- **Languages:** JavaScript, C++
- **Tools & Cloud:** Git, GitHub, AWS, Render, ESP32
- **Technical Fundamentals:** Data Structures, Software Design

PROJECTS

Medical Summarizer | Medical Summarizer

- Engineered a full-stack platform that converts doctor-patient conversations into structured, patient-friendly medical reports using Gemini NLP - eliminating manual transcription for clinics.
- Designed a RESTful Node.js/Express API in TypeScript and a responsive React frontend styled with Tailwind CSS; integrated Gemini API for automated NLP-based summarization, reducing report generation time by ~70%.
- Packaged backend and frontend services in Docker containers and implemented a CI/CD pipeline on AWS CodeDeploy with GitHub Actions for automated, zero-downtime deployments
- Source code: https://github.com/SURAJ-PARMAR2005/Hack_LLM2

Smart Classroom Monitoring System | Smart Classroom Monitoring System

- Built a distributed IoT system using ESP32 sensors that transmit structured JSON to Supabase Realtime every 5 seconds, enabling real-time data ingestion and monitoring across 10+ classrooms
- Developed a React and TypeScript dashboard with Tailwind CSS and GSAP animations, integrating live Supabase Realtime charts to visualize classroom utilization and reduce manual checks by ~80%
- Implemented JWT-based device authentication to secure ESP32-to-cloud communication, preventing unauthorized data injection.
- Source code: https://github.com/SURAJ-PARMAR2005/Hack_LLM2

Food Delivery App | Food Delivery App

- Developed a production-grade full-stack MERN food delivery platform supporting JWT authentication, role-based access control (user/admin), and secure session management.
- Built responsive React UI enabling browsing, search, and filtering across 50+ menu items; implemented end-to-end order lifecycle management with real-time status updates.
- Deployed on AWS + Render with an admin analytics dashboard providing order volume, revenue, and user metrics.
- Source code: https://github.com/SURAJ-PARMAR2005/food_delivery_website

FinTech Access Control & Activity Analytics API | FinTech Access Control & Activity Analytics API

- Designed and deployed a production-ready REST API with Node.js, Express.js, and MongoDB, hosted on Render with environment-based configuration for local and production deployments.
- Implemented JWT authentication and Role-Based Access Control (RBAC) with three roles (Admin, Analyst, Viewer), enforcing fine-grained route protection based on user permissions.
- Built custom request validators to enforce strict input rules, including unique email constraints and password strength checks (uppercase, numeric, and special character requirements).
- Source code: https://github.com/SURAJ-PARMAR2005/Zorvyn_Assignment

ACHIEVEMENTS & HACKATHONS

- **Hack LLM - National Level Hackathon:** Team Leader & Top 10 Finalist
- **Medha Hackathon:** Hackathon Participant
- **LeetCode (300+ problems):** Active competitive programmer with 300+ problems solved across Arrays, Strings, Linked Lists, HashMaps, Trees, Graphs, Recursion, Sliding Window, and other core DSA topics (excluding Dynamic Programming) using C++.
